UPDATE 2014

Centre for Ageing Research
and Development in Ireland

OVERVIEW

CARDI has recently updated its website AgeStats.ie. The update involved adding 19 new surveys to the 2012 database bringing the total number of searchable surveys to 50.

The website provides an overview of selected datasets on ageing in Northern Ireland (NI) and the Republic of Ireland (RoI). It is designed to be used by researchers who are engaged in comparative research on ageing.

KEY STATS

- Agestats.ie now includes 50 surveys (27 NI; 23 RoI) covering:
 - 9 themes
 - 190 sub-themes (compared with 187 in Nov 2012)
 - 1659 measures in total
- 7427 individual data points identified across 50 surveys

METHODOLOGICAL ISSUES

A number of points need to be borne in mind when using the database:

- First, not all data is available for all survey questionnaires. Some contain sensitive information, which is either removed from the publicly released datasets or top-coded.
- Second, there are a number of derived variables in each survey dataset which do not appear in survey questionnaires, but can be found in the codebooks and/or survey datasets.
- Third, the extent to which survey datasets match survey questionnaires depends very much on the data collector/sponsor, the public release of data (eg. crime survey data, health survey data), nature/content of the survey, the questions asked, whether persons and/or household level information is being sought, the period in which data were collected, the sample size, geographic location, the lag between the collection of data and its public release, and use(s) to which data can be put.

In short, there are many inconsistencies in the type and level of information initially collected and that which is ultimately released for use by academic and policy researchers.

KEY CHANGES

During the course of updating Agestats.ie, several notable changes (additions and revisions) were made, which are summarised fully in Table 2.

- Minor revisions to wording of sub-themes and/or measures.
- Reference periods (where applicable) added to sub-themes and/or measures
- Added new measures to some sub-themes (e.g. two meals a day & fresh fruit and vegetables everyday added as measures of material deprivation).
- Added new sub-themes and measures (e.g. retirement planning).
- Some measures removed as they do not appear in updated survey/datasets, whilst other measures moved from existing sub-themes into new sub-themes (e.g. some measures in retirement history moved in to new retirement planning sub-theme).
- Expanded measure indicators to identify (to the extent possible) whether: derived variables exist in the survey dataset (d); measures can be created using variable(s) existing in the survey datasets (c); net rateable value (nrV) used to estimate value of asset; measure available in the survey dataset (npa). Note: specification of the measure indicators were based on availability of updated survey datasets.
